FLOW ASIA

Change Request Update: New and Changed Features

HR, Payroll & MIS System | Explained module by module

Prepared by: IT Project Manager

Covers: selfie review by HR, dashboard charts with ML, daily progress reports

Affected modules: M1, M2, M3, M4, M7, M11, M12, S1, S2B

Document Version: 1.0 | Date: October 8, 2026

1. What Changed

Three new requirements were added after the original plan. This document explains only these changes: what each one means, how it works, which modules must change, what exactly each module must build, and how the work is checked.

Change	Requirement	Main module	Also changes
CR1 Selfie review	HR can reject a Time In/Out selfie when the person is not the same employee as the registered one. A rejected punch is invalid.	M3 Attendance, Selfie, QR & Selfie Review	M2, M1, M4, M7, M12, M11, S2B
CR2 Charts and ML	Graphics and charts on the dashboard, possibly using machine learning.	M11 Reports, MIS Dashboard, Charts & ML Insights	S1, S2B (data feeds from M3, M5, M6, M7)
CR3 Progress reports	Every employee submits a progress report as proof of work for their shift, before Time Out.	M12 Notifications, Progress Reports & Self-Service	M3, M1, M4, M11, S2B

1.1 Affected modules at a glance

Module	New features	Change	Members	Window
M1 Admin, Login & Security	2	CR1, CR3	#01-#02	Oct 6 - Oct 13 (8 days)
M2 Employee Records & Org Setup	1	CR1	#03-#05	Oct 6 - Oct 16 (11 days)
M3 Attendance, Selfie, QR & Selfie Review	5	CR1, CR3	#06-#08	Oct 8 - Oct 20 (13 days)
M4 Calendar & Schedule Dashboard	2	CR1, CR3	#09-#11	Oct 12 - Oct 22 (11 days)
M7 Payroll & Payslips	1	CR1	#16-#18	Oct 12 - Oct 24 (13 days)
M11 Reports, MIS Dashboard, Charts & ML Insights	8	CR1, CR2, CR3	#23-#24 (+#22)	Oct 15 - Oct 24 (10 days)
M12 Notifications, Progress Reports & Self-Service	5	CR1, CR3	#25 (+#21)	Oct 12 - Oct 20 (9 days)
S1 UI/UX & Database Design	1	CR2	#26-#27	Oct 5 - Oct 17 (13 days)
S2B QA: System Testing & UAT	2	CR1+CR3, CR2	#28-#29	Oct 19 - Oct 27 (9 days)
Total	27			

Modules not listed (M5, M6, M8, M9, M10, S2A, S3A, S3B) have no new features. M9 and M10 members help other teams (see 4).

1.2 Names that changed

- M3 is now **Attendance, Selfie, QR & Selfie Review** (it adds the HR review step).
- M11 is now **Reports, MIS Dashboard, Charts & ML Insights**.
- M12 is now **Notifications, Progress Reports & Self-Service** and gains member #21 as a supporter. Member #22 also supports M11 for the ML items.

2. How Each Change Works from Start to Finish

2.1 CR1: HR selfie review

Purpose: make sure the person in the selfie is the same employee who owns the account, so nobody can clock in for someone else.

- The employee takes a live selfie and shows the one-time QR code. The punch is recorded with the selfie (this part already existed).
- HR opens the review screen. Each Time In and Time Out appears with the new selfie **next to the employee's registered photo**.
- HR presses **Verify** (the punch stays valid) or **Reject**. A reject needs a written reason.
- A rejected punch becomes **Invalid**. It is not deleted: the record stays in the log, marked invalid with the reviewer, time and reason.
- Attendance is recomputed. The day goes back to **missing log** until the employee corrects it, so hours, late and overtime from that punch no longer count.
- The employee is notified and can **resubmit**: a new selfie and a correction request. HR can restore a rejected punch only with a written note.
- The calendar shows the day as **Invalid**, payroll ignores the rejected punch, and every rejection is written in the audit trail.

2.2 CR3: Daily progress report before Time Out

Purpose: give each employee a record that proves what they did during their time or shift.

- The employee works their shift. A reminder arrives before the shift ends if no report was sent.
- The employee fills in the **progress report**: tasks done, hours, notes and proof (photo, file or link).
- When the employee presses **Time Out**, the system checks for today's report. If there is none, Time Out is **blocked** and a button opens the report form.
- After the report is submitted, Time Out is accepted. The day shows **report submitted** on the calendar and the pop-up opens the report.
- The supervisor reviews the report: **approve**, **comment** or **return it for correction**. HR can search reports by employee and date.
- Reports feed a **compliance report** (submitted vs missing). The rule can be switched on or off in Settings.

2.3 CR2: Dashboard charts and ML insights

Purpose: let management see trends at a glance and get simple predictions.

- Charts show attendance (present, late, absent) by day and department, plus headcount, leave and overtime.
- Charts follow one style guide: black, grey and white with neon green highlights, large readable labels.
- **ML insights are simple and explainable**: a 2-week forecast of late and absent trends (moving average or linear regression), alerts for unusual overtime or attendance (z-score), and a payroll cost forecast for the next cut-off.
- Every insight has a plain-words note explaining how it was computed. Forecasts are labeled as estimates.
- A new system has little history, so the demo uses sample data; real data improves the forecasts over time.

3. Module-by-Module Updates

For each affected module: why it changes, the new features (owner and due date), what the team must build, how it connects to others, and how it is checked. Due dates come from the Feature Tracker.

M1 Admin, Login & Security

Members	#01-#02	Window	Oct 6 to Oct 13 (8 days)
Needs from	Database schema (S1) by Oct 8	Hands over	Login, roles and settings to ALL teams by Oct 13

Why this module changes

M1 owns security, settings and the audit trail. Both CR1 and CR3 need a control from M1: every selfie rejection must leave a permanent trace, and the progress report rule needs an on/off switch.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F016	Audit trail entry for every selfie rejection (who, when, reason)	#02	CR1	Required	Oct 11	Oct 12
F017	Setting: require progress report before Time Out (on/off)	#02	CR3	Required	Oct 11	Oct 12

What the team must build

- **Audit entry for every selfie rejection:** record who rejected, when, which punch, which employee and the reason. The entry appears in the existing Audit Trail screen, is read-only and searchable by user and date. A restore note (when HR reinstates a punch) is also logged.
- **Setting: require progress report before Time Out:** one switch on the Settings page (default ON). M3 reads this switch to decide whether to block Time Out. Changing the switch is also written to the audit trail.

Connections

M3 (#08 writes the rejection entries; #06 reads the setting), M12 (report form).

How it is checked

- A rejection made in M3 appears in the Audit Trail within seconds with all fields filled.
- Turning the setting OFF lets an employee time out without a report; turning it ON blocks Time Out again.

M2 Employee Records & Org Setup

Members	#03-#05	Window	Oct 6 to Oct 16 (11 days)
Needs from	Schema (S1), roles (M1)	Hands over	Employee, holiday and schedule data to M3, M5, M6, M7 (core profile by Oct 12)

Why this module changes

CR1 needs a trusted face to compare against. Without an approved registered photo, HR has nothing to check the selfie with.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F030	Registered reference photo: capture or upload and HR approval (basis for selfie checks)	#03	CR1	Required	Oct 14	Oct 15

What the team must build

- **Registered reference photo:** each employee profile holds one approved registered photo. It can be captured with the camera or uploaded (file type and size limits like the 201 file).
- **HR approval:** a new or changed photo stays pending until HR approves it. Only the approved photo is used for comparison. Older photos are kept in history, never overwritten.
- **Visibility:** only HR and Payroll roles can see the photo. The review screen in M3 reads it through a simple lookup by Employee ID.
- **Missing photo:** an employee with no approved photo is marked 'No reference photo' in the review queue so HR knows the check cannot be completed.

Connections

M3 (#06, #08 compare selfies with this photo), M1 (permissions).

How it is checked

- HR can see a punch selfie and the registered photo side by side for the same employee.
- Replacing the photo keeps the old one in history and requires HR approval.

M3 Attendance, Selfie, QR & Selfie Review

Members	#06-#08	Window	Oct 8 to Oct 20 (13 days)
Needs from	Employees and registered photo (M2), shifts (M6), settings (M1)	Hands over	Attendance data to M4 Calendar, M7 Payroll, M11 Reports

Why this module changes

M3 is the module most affected. It already records Time In/Out with a selfie and QR. It now needs a human review step, a way to cancel a bad punch, and a new rule that blocks Time Out until a report exists.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F046	HR selfie review: Verify or Reject each Time In/Out (side by side with registered photo)	#08	CR1	Required	Oct 16	Oct 19
F047	Rejected punch becomes invalid: reason required, logged, cannot be undone without an HR note	#08	CR1	Required	Oct 17	Oct 19
F048	Recompute attendance when a punch is rejected (day returns to missing log until corrected)	#07	CR1	Required	Oct 17	Oct 19
F049	Resubmit flow after rejection: new selfie and correction request	#06	CR1	Required	Oct 18	Oct 19
F050	Time Out gate: block Time Out until today's progress report is submitted	#06	CR3	Required	Oct 18	Oct 19

What the team must build

- **HR selfie review (#08):** a review queue lists punches waiting for review. Each item shows the new selfie beside the registered photo with the employee, time and type (In or Out). HR chooses Verify or Reject.
- **Rejected punch becomes invalid (#08):** a reason is required. The punch is marked Invalid but never deleted, so the sealed attendance log stays complete. The reviewer, time and reason are stored. Undoing a rejection needs an HR note.
- **Recompute when rejected (#07):** the computation engine treats an invalid punch as no log. Hours worked, late, undertime, overtime and night differential from that punch are removed and the day returns to 'missing log' until corrected.
- **Resubmit flow (#06):** the employee sees the rejection and its reason, then takes a new selfie and files a correction request that goes through the normal correction approval.
- **Time Out gate (#06):** when the employee presses Time Out, the system looks for today's progress report. If none exists, it shows a message and a button to open the report form. The check respects the M1 setting.

Connections

M2 (registered photo), M1 (audit log, setting), M12 (rejection notice, report form), M4 (Invalid day), M7 (valid punches only), M11 (rejected-punch report).

How it is checked

- Reject a punch: it shows Invalid, hours are removed, the audit trail has the reason, the employee is notified.
- Verify a punch: nothing changes in hours.
- Time Out without a report is blocked; with a report it succeeds.
- The employee can resubmit and the corrected day is counted.

M4 Calendar & Schedule Dashboard

Members	#09-#11	Window	Oct 12 to Oct 22 (11 days)
Needs from	Data models of M3, M5, M6 (by Oct 12), holidays (M2)	Hands over	Employee and HR calendar screens to the client demo

Why this module changes

The calendar must tell the truth about the new states: a rejected punch and a day with a progress report.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F075	Calendar shows a rejected punch as an 'Invalid' day	#09	CR1	Required	Oct 19	Oct 19
F076	Calendar day pop-up shows 'report submitted' and opens the report	#10	CR3	Required	Oct 20	Oct 22

What the team must build

- **Invalid day (#09):** add a status 'Invalid' for days whose punch was rejected. It takes its place in the status priority rules (Holiday, Approved Leave, then Invalid or Absent, then Late). It has its own legend entry and a marker that does not rely on color alone.
- **Report submitted in the day pop-up (#10):** the pop-up of a day shows 'Report submitted' and a link that opens the progress report. HR sees the same when viewing an employee's calendar. Days without a report show 'No report' for shifts where one is required.

Connections

M3 (Invalid status), M12 (reports).

How it is checked

- A rejected day shows as Invalid for both the employee and HR, and the legend explains it.
- Clicking a day with a report opens that report.

M7 Payroll & Payslips

Members	#16-#18	Window	Oct 12 to Oct 24 (13 days)
Needs from	Compensation (M2), M3, M5, M6 outputs, M8 tables	Hands over	Payroll data to M11 Reports; payslips to Employees

Why this module changes

Pay must follow only valid attendance. If a rejected punch still counted, the selfie check would have no effect on salary.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F098	Payroll uses verified punches only (rejected punches excluded)	#17	CR1	Required	Oct 22	Oct 22

What the team must build

- **Verified punches only (#17):** the computation reads only punches that are not rejected. Hours, late, undertime, overtime and night differential from a rejected punch are excluded.
- **Exceptions list:** an employee with a rejected punch or with a punch still waiting for review appears in the payroll exceptions list so the Payroll Officer can resolve it before approval.
- **Recompute:** when a rejected day is corrected, the payroll can be recomputed until it is locked.

Connections

M3 (valid-punch rule), M4, M11.

How it is checked

- Payroll for a test employee with one rejected punch matches the hand-computed result without that punch.
- The exceptions list shows the employee.

Note: Decision needed by Oct 15 between M3 and M7: punches still waiting for review. Recommended default: they count unless rejected, and HR clears the review queue before payroll approval.

M11 Reports, MIS Dashboard, Charts & ML Insights

Members	#23-#24 (+#22)	Window	Oct 15 to Oct 24 (10 days)
Needs from	Live data from ALL modules (M3, M5, M7 first); chart style from S1 (#27)	Hands over	Dashboards and 10 reports to the client demo

Why this module changes

CR2 is mainly here. The dashboard must show clear graphics and optional ML insights. CR1 and CR3 also need two new reports.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F119	Attendance charts: present, late, absent trend by day and department	#23	CR2	Required	Oct 19	Oct 19
F120	Headcount, leave and overtime charts	#23	CR2	Required	Oct 19	Oct 19
F121	Report: rejected punches by employee and reviewer	#23	CR1	Required	Oct 20	Oct 22
F122	Report: progress report compliance (submitted vs missing)	#23	CR3	Required	Oct 20	Oct 22
F123	ML insight: forecast of late and absent trend for the next 2 weeks (moving average or linear regression)	#24	CR2	Stretch	Oct 21	Oct 22
F124	ML insight: unusual overtime or attendance pattern alerts (z-score anomaly flag)	#22	CR2	Stretch	Oct 21	Oct 22
F125	ML insight: payroll cost forecast for the next cut-off	#22	CR2	Stretch	Oct 22	Oct 22
F126	Plain-words explanation for each ML insight (how it was computed)	#24	CR2	Stretch	Oct 22	Oct 22

What the team must build

- **Attendance charts (#23):** daily and weekly trend of present, late and absent, filterable by department and date range.
- **Headcount, leave and overtime charts (#23):** simple bar and line charts on the HR dashboard.
- **Rejected-punch report (#23, CR1):** rejected punches by employee and by reviewer, with reasons.
- **Progress report compliance (#23, CR3):** submitted vs missing reports by employee, department and date.
- **ML forecast (#24, stretch):** forecast of the late and absent trend for the next 2 weeks using a moving average or linear regression.
- **Anomaly alerts (#22, stretch):** flag unusual overtime or attendance patterns using a z-score rule.
- **Payroll cost forecast (#22, stretch):** estimate of the next cut-off cost from previous periods.
- **Plain-words explanations (#24, stretch):** a short note under each insight saying what data and method were used.

Connections

S1 (#27 chart style), M3, M5, M6, M7 (data feeds), S2B (#29 checks numbers).

How it is checked

- Chart totals equal the numbers in the source modules and reports.
- Each ML item shows its explanation and an 'estimate' label.

Note: Charts and the two new reports are required. The four ML items are stretch: if time is short, set their weight to 0 in the Feature Tracker and ship the charts. #22 starts on the ML items after finishing Contracts (M10).

M12 Notifications, Progress Reports & Self-Service

Members	#25 (+#21)	Window	Oct 12 to Oct 20 (9 days)
Needs from	Roles (M1), screens template (S1)	Hands over	Notifications to M5, M9, M10; announcements and profile pages

Why this module changes

CR3 lives here. M12 is the employee self-service area, so the progress report form, reminder and review belong with it. It also delivers the rejection notice for CR1.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F081	Notification: punch rejected, resubmit needed	#25	CR1	Required	Oct 16	Oct 19
F082	Daily progress report form: tasks done, hours, notes and proof upload (photo, file or link)	#25	CR3	Required	Oct 16	Oct 19
F083	Reminder before shift end if no progress report yet	#25	CR3	Required	Oct 17	Oct 19
F084	Supervisor review: approve, comment or return a report for correction	#21	CR3	Required	Oct 17	Oct 19
F085	HR view: progress reports per employee and date, with search	#21	CR3	Required	Oct 18	Oct 19

What the team must build

- **Daily progress report form (#25):** fields for tasks done, hours, notes and proof (photo, file or link). One report per day or shift, with states Draft, Submitted, Returned and Approved.
- **Reminder before shift end (#25):** a notification when no report has been sent yet. The lead time is a setting.
- **Notification: punch rejected (#25, CR1):** tells the employee and supervisor that a punch was rejected, gives the reason and links to the resubmit flow.
- **Supervisor review (#21):** the supervisor sees reports of their team and can approve, add a comment or return a report for correction. A returned report notifies the employee.
- **HR view (#21):** HR searches reports by employee, date and status and opens any report.

Connections

M3 (Time Out gate reads report status), M1 (setting), M4 (calendar pop-up), M11 (compliance report).

How it is checked

- An employee cannot time out without a submitted report (when the setting is ON).
- Supervisor actions (approve, comment, return) update the report status and notify the employee.
- HR can find a report by employee and date.

Note: M12 has two people for 9 days. #21 joins from Oct 15. The report form must be ready by Oct 15 so M3 can finish the Time Out gate.

S1 UI/UX & Database Design

Members	#26-#27	Window	Oct 5 to Oct 17 (13 days)
Needs from	SRS draft from Documentation (S3A)	Hands over	ERD, schema and UI template to ALL teams by Oct 8; UI polish until Oct 17

Why this module changes

Charts must look like the rest of the system and be easy to read, so S1 sets the rules before M11 builds them.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F008	Chart and graph style guide (monochrome, neon green highlight, large readable labels)	#27	CR2	Required	Oct 15	Oct 15

What the team must build

- **Chart and graph style guide (#27):** monochrome palette (black, grey, white) with neon green for highlights only; large readable labels; allowed chart types (line, bar, donut); legends and values written in text, not color alone; empty and loading states.

Connections

M11 (#23 uses the guide).

How it is checked

- M11 charts follow the guide and stay readable at the larger text size.

S2B QA: System Testing & UAT

Members	#28-#29	Window	Oct 19 to Oct 27 (9 days)
Needs from	Working features (code freeze Oct 24)	Hands over	Bug list, UAT sign-off sheet, test report

Why this module changes

The new features touch money (payroll) and identity (selfie review), so they need targeted tests.

New features

ID	Feature	Owner	Change	Priority	Due	Checkpoint
F138	Check dashboard charts and ML outputs against source data	#29	CR2	Required	Oct 24	Oct 25
F139	End-to-end test: selfie rejection, progress report gate and payroll exclusion	#28	CR1+CR3	Required	Oct 25	Oct 25

What the team must build

- **Check charts and ML outputs (#29):** compare dashboard numbers and forecasts with the source data and the QA sample history. Confirm each ML result has its explanation and estimate label.
- **End-to-end test (#28):** run selfie rejection, the progress report gate and payroll exclusion in one scenario: employee times in, HR rejects, calendar shows Invalid, payroll excludes the punch; employee tries Time Out without a report, is blocked, submits a report and times out.

Connections

M3, M7, M11, M12, M4.

How it is checked

- All scenarios pass with no critical or high bugs open.
- Results are written in the test report.

4. Impact on Schedule, People and Risks

Area	Effect
Module windows	No window changed. M3 stays Oct 8-20 (13 days), M11 Oct 15-24 (10 days), M12 Oct 12-20 (9 days). Features were added inside these windows.
Workload	M3 is the busiest module. Member #08 owns 8 features and is marked Heavy in the Assignments sheet. M12 has two people for 9 days.
Helpers	#21 (Recruitment) joins M12 from Oct 15 for supervisor review and the HR view. #22 (Contracts) supports M11 on the ML items after Oct 19.
Checkpoints	Oct 15: report form ready, valid-punch rule agreed between M3 and M7, review screen working. Oct 19-22: Time Out gate, Invalid day on calendar and payroll exclusion connected. Oct 22: charts and reports in place. Oct 25 (code freeze): everything built; Oct 26-27: end-to-end test and UAT.

4.1 Risks and how they are handled

Risk	Handling
M3 and M7 disagree on what counts as a valid punch	Agree the rule by Oct 15 (recommended default in section 3, M7). PM decides if no agreement.
Time Out gate blocks staff at the end of a shift	The M1 setting can switch the rule off; the reminder before shift end gives employees time to submit; supervisors can return reports instead of blocking pay.
Too little real data for ML	Use QA sample history; label forecasts as estimates; keep ML as stretch.
Face check depends on HR attention	HR reviews before the payroll cut-off; payroll exceptions list shows unreviewed punches.
M12 is thin on people	#21 joins on Oct 15; the report form is the first thing built.

4.2 Open points for the client

- Should the selfie also be compared automatically by software (face match)? This plan covers HR's manual review only. Automatic matching would be a larger, separate feature.
- How soon must HR review each selfie (for example, before each payroll cut-off)?
- Should supervisors be able to override the Time Out gate for special cases, or is the on/off setting enough?
- Which shifts or roles must submit a progress report, and should the form differ by department?
