FLOW ASIA

Centralized HR, Payroll & MIS System

Project Plan, Module Specification & Team Assignment

Client: Flow Asia (Art & Entertainment Company)
Prepared by: IT Project Manager
Project Team: 32 members (+ Project Manager)
Document Version: 1.0 | Date: September 30, 2026
Status: For Client Review

1. Project Overview

Flow Asia is an art and entertainment company. It needs one centralized Management Information System (MIS) that manages Human Resources and Payroll from a single database: employee records, attendance, leave, overtime, automatic salary computation, payslips, reports and dashboards. This plan lists every module, its features, the team members assigned, the task division, the documentation deliverables and the management approach. It is deliberately scoped to be completed by a starting IT team.

1.1 Project Objectives

- Replace manual/spreadsheet HR and payroll work with one web-based system used by HR, Payroll, Supervisors and Employees.
- Automate attendance computation and salary computation (late, undertime, overtime, holiday pay, contributions, tax, net pay).
- Give every employee a calendar dashboard and give HR a searchable calendar view for any employee.
- Provide accurate, exportable reports and dashboards for management decisions (MIS).
- Deliver complete documentation and a client presentation paper.

1.2 Scope

In scope: the 12 functional modules and 3 support teams described in this document. **Out of scope (possible future phases):** native mobile app, facial-recognition/biometric hardware integration, direct e-filing with government agencies, performance appraisal/360 review, learning management, multi-country payroll.

1.3 Users and Roles

Role	Main Uses
Super Admin	System settings, users, roles, backup, audit trail.
HR Admin / HR Staff	Employee records, leave/OT/attendance oversight, recruitment, contracts, reports, search any employee calendar.
Payroll Officer	Run payroll, contributions, loans, payslips; sees salary data.
Supervisor / Manager	Approve leave, OT, corrections and off-site work for their team; team calendar.
Employee	Own calendar dashboard, clock in/out, file leave/OT/corrections, view payslips and profile.

1.4 Recommended Technology (Beginner-Friendly)

- **Backend:** Laravel (PHP) with built-in authentication, migrations and scheduler (alternatives: Django or Node/Express).
- **Database:** MySQL or PostgreSQL. **Frontend:** Blade/Bootstrap or Tailwind, FullCalendar.js (calendar), Chart.js (charts).
- **PDF/Excel:** DomPDF or Snappy for payslips/DTR; Laravel Excel for imports and exports.
- **Tools:** Git + GitHub (branches per module, pull requests), Trello/Jira/Notion (task board), Figma (design), Google Drive/Notion (documents), Postman (API tests).
- **Hosting:** a single web server with HTTPS and daily backups; a staging copy for testing.

1.5 Important Design Rule for Payroll

Payroll rules change (contribution rates, tax tables, holiday multipliers). Therefore all rates, tables and multipliers are stored in editable setup tables with effectivity dates and are **never hard-coded**. Before go-live, HR/Accounting must confirm the current government tables and company pay policies; the team enters them as setup data.

2. Module Summary and Member Allocation

The 32 team members (numbered #01 to #32) are divided as shown. The Project Manager is in addition to the 32.

No.	Module	Members	Nos.	Short Description
M1	System Administration, Authentication & Security	2	#01-#02	Controls who can log in and what each person can see or do. It is the foundation every other module sits on.
M2	Employee Records & Organization Setup	3	#03-#05	The master database of every employee plus the company structure (departments, positions, holidays). Payroll and attendance depend on this data.
M3	Attendance & Time Tracking	3	#06-#08	Records when employees work and automatically computes hours, lateness, undertime and absences.
M4	Calendar & Schedule Dashboard (Key Requested Feature)	3	#09-#11	A color-coded calendar for every employee and HR. Employees see their own calendar the moment they log in (main dashboard); HR can search any employee and view that person's calendar.
M5	Leave Management	2	#12-#13	Handles leave types, credits, filing, approval and balances.
M6	Overtime & Shift Scheduling	2	#14-#15	Defines who works when, and handles overtime requests and premium pay rules.
M7	Payroll Computation & Payslips	3	#16-#18	The core of the system: automatically computes gross pay, deductions and net pay per cut-off and generates payslips.
M8	Statutory Contributions, Loans & Deductions	2	#19-#20	Handles government contributions, withholding tax, 13th-month pay, loans, and all other recurring or one-time earnings/deductions.
M9	Recruitment & Onboarding	1	#21	A simple applicant tracker and new-hire checklist for a starting team.
M10	Talent & Project Contract Management (Art & Entertainment)	1	#22	Fits Flow Asia's business: many crew, artists and talents work per project, not on permanent payroll.
M11	Reports & MIS Dashboard	2	#23-#24	The 'MIS' layer: management-level dashboards and exportable reports built from all other modules.
M12	Notifications, Announcements & Employee Self-Service	1	#25	Keeps employees and approvers informed and gives employees a single self-service place.
S1	UI/UX & Database Design	2	#26-#27	Sets the look-and-feel and the data foundation so all 25 developers build on the same base.
S2	Quality Assurance & Testing	2	#28-#29	Makes sure everything works before the client sees it.
S3	Documentation & Client Presentation	3	#30-#32	Produces all project papers and the presentation to the client.
	TOTAL	**32**	#01-#32	

Development modules = 25 members (M1-M12); support teams = 7 members (S1-S3). Modules with 1 member are the smallest and least dependent, and are supervised by the Technical Lead.

2.1 How Modules Connect (Data Flow)

From	To	What Flows
Employee Records (M2)	All modules	Employee ID, department, supervisor, salary, schedule, status.
Attendance (M3) + Shifts/OT (M6)	Payroll (M7)	Days worked, late/undertime minutes, absences, approved OT hours, night differential.
Leave (M5)	Attendance (M3), Payroll (M7)	Approved leave prevents Absent; unpaid leave becomes a deduction; unused-leave conversion.

From	To	What Flows
Attendance, Leave, OT, Holidays, Events	Calendar (M4)	One JSON feed for each employee/date range.
Statutory & Loans (M8), Talent Contracts (M10)	Payroll (M7)	Contributions, tax, loans, allowances, project pay.
Recruitment (M9)	Employee Records (M2), Users (M1)	Hired applicant converts to employee and account.
All modules	Reports & MIS (M11), Notifications (M12)	Data for dashboards and alerts.

3. Detailed Module Specifications and Task Division

Each module below lists its purpose, complete feature description, assigned members and how the members split the work. Every developer also writes a 2-3 page module write-up (features, screen captures, flow) for the Documentation team.

Module 1: System Administration, Authentication & Security

Members Assigned	2 (#01-#02)
Short Description	Controls who can log in and what each person can see or do. It is the foundation every other module sits on.
Integrates With	All modules (permissions, settings, audit log).

Features and Detailed Explanation

- **Login / Logout:** Email or username + password. Passwords stored hashed (bcrypt), never plain text. Forgot/reset password by email link; forced password change on first login; account locks for 15 minutes after 5 failed attempts.
- **Role-Based Access Control (RBAC):** Six starting roles: Super Admin, HR Admin, HR Staff, Payroll Officer, Supervisor/Manager, Employee. A permission matrix per module (view / create / edit / delete / approve) so, for example, only Payroll Officers see salaries.
- **User Account Management:** Create, edit, deactivate and reset accounts; every account is linked to one employee record; bulk-create accounts for newly imported employees.
- **Audit Trail:** Automatic log of who changed what and when (old value vs new value) for salary, attendance edits, leave/OT approvals and payroll approval. Read-only, searchable by user/date/module.
- **System Settings:** Company profile and logo, timezone (Asia/Manila), currency (PHP), working hours, grace period for lateness, payroll cut-offs, default leave rules. One settings screen that other modules read from.
- **Backup & Session Security:** Scheduled daily database backup plus a manual 'Backup Now' button; session timeout after inactivity; login history (date, IP, device).

Task Division

Member	Assigned Tasks
#01	Login/logout, password reset, account lockout, session timeout, role and permission matrix (RBAC middleware). Writes the module write-up.
#02	User account management screens, audit trail logging and viewer, system settings page, backup/restore tool.

Module 2: Employee Records & Organization Setup

Members Assigned	3 (#03-#05)
Short Description	The master database of every employee plus the company structure (departments, positions, holidays). Payroll and attendance depend on this data.
Integrates With	Feeds Attendance, Leave, Payroll, Calendar, Reports.

Features and Detailed Explanation

- **Employee Profile:** Auto-generated Employee ID; personal info (name, birthdate, address, contact, civil status, emergency contact); employment info (date hired, status: probationary / regular / contractual / project-based / freelance, department, position, immediate supervisor, work schedule); profile photo.
- **Government & Bank Details:** TIN, SSS, PhilHealth and Pag-IBIG numbers; bank name and account number for salary crediting. Sensitive fields visible only to HR/Payroll.
- **Compensation Info:** Basic salary, pay type (monthly / daily / hourly), recurring allowances, pay schedule (semi-monthly or monthly). Every salary change is saved with an effectivity date so history is never lost.
- **Digital 201 File:** Upload and store contract, resume, IDs, NBI/clearances, certificates. File-type and size limits; document expiry date with alert; per-employee document checklist showing what is missing.

- **Employment History & Movements:** Timeline of promotions, transfers, regularization, salary adjustments; separation processing (resignation/termination) with a clearance checklist and last-day date that stops future payroll.
- **Organization Setup (Master Data):** Departments (e.g., Production, Creative, Talent Management, Events, Marketing, Finance, IT, HR), positions, branches/locations, pay grades, holiday calendar (regular/special), work-schedule templates. Editable by HR Admin.
- **Search, Import & Export:** Search by name/ID/department/status; filters; import employees from Excel/CSV with error report; export masterlist to Excel/PDF. Optional printable ID card.

Task Division

Member	Assigned Tasks
#03	Employee profile CRUD, government/bank details, search and filters, Excel/CSV import and export.
#04	Digital 201 file (uploads, checklist, expiry alerts), employment history timeline, separation and clearance checklist.
#05	Organization master data (departments, positions, branches, pay grades, holiday calendar, schedule templates) and compensation info with effectivity dates.

Module 3: Attendance & Time Tracking

Members Assigned	3 (#06-#08)
Short Description	Records when employees work and automatically computes hours, lateness, undertime and absences.
Integrates With	Reads Employees, Shifts, Holidays, Leave; feeds Calendar, Overtime, Payroll, Reports.

Features and Detailed Explanation

- **Web Clock-In / Clock-Out:** Big Time In / Time Out buttons on the dashboard; server-side timestamp (cannot be faked by changing the device clock); optional break in/out; prevents double time-in. Optional starter-level controls: office IP restriction and QR-code kiosk.
- **Log Import:** Upload biometric/device logs or a CSV/Excel file; system matches Employee IDs, reports unmatched rows, and avoids duplicates.
- **Automatic Computation:** Per day: hours worked, late minutes (after the grace period), undertime, half-day, absence, night-differential hours (10 PM-6 AM), rest day and holiday flags. All rules come from Settings and the assigned shift.
- **Attendance Status Codes:** Present, Late, Absent, On Leave, Holiday, Rest Day, Half-Day, Overtime, Off-site. The same codes/colors are used by the Calendar module.
- **Nightly Absent Marking:** A scheduled job runs every night: if there is no log and no approved leave/holiday/rest day, the day is marked Absent.
- **Off-site / Field Work:** Art and entertainment staff often work at shoots and events. Employee files an Off-site Assignment (place, date, time), supervisor approves, and the day counts as present without a web clock-in.
- **Daily Time Record (DTR) & Correction Requests:** Daily and monthly DTR view and printable PDF. Missed-punch/correction request with reason and attachment, routed Supervisor then HR; corrections are logged in the audit trail.

Task Division

Member	Assigned Tasks
#06	Clock in/out and break logging, duplicate and validation rules, IP/QR options, off-site assignment filing and approval.
#07	Computation engine (late, undertime, absent, night differential, half-day), status assignment, nightly scheduled job, unit tests with sample cases.
#08	DTR daily/monthly views and print, correction-request workflow, CSV/biometric log import with error report.

Module 4: Calendar & Schedule Dashboard (Key Requested Feature)

Members Assigned	3 (#09-#11)
Short Description	A color-coded calendar for every employee and HR. Employees see their own calendar the moment they log in (main dashboard); HR can search any employee and view that person's calendar.
Integrates With	Reads Attendance, Leave, Overtime, Holidays; shown on both Employee and HR dashboards.

Features and Detailed Explanation

- **Employee Main Dashboard:** Landing page after login shows the employee's monthly calendar immediately. Color legend: Late = orange, Absent = red, Approved Leave = blue, Pending Leave = light blue/striped, Overtime = purple, Holiday = green, Rest Day = grey, Present = white with check mark, Half-Day = yellow.
- **Day Details Pop-up:** Click any date to see: shift, time in / time out, hours worked, late minutes, OT hours, leave type and approval status, holiday name, remarks and any correction request.
- **Month Summary Cards:** Above the calendar: days present, number of lates and total late minutes, absences, leave days used, OT hours this cutoff, leave balances, and next payday. Month/week toggle and previous/next navigation.
- **HR Search-and-View:** HR types a name, ID or department in a search box, selects the employee and instantly sees that employee's calendar and summary cards (read-only) with the same colors. Filter by month; Print / Export to PDF.
- **Team / Department Calendar:** HR and supervisors see who is absent, late or on leave today, overlapping leaves in a team, and pending leave/OT approvals on the calendar.
- **Company Events:** HR posts events (shoots, premieres, town halls, holidays) that appear on every calendar with a distinct marker.
- **How It Works Technically:** One calendar API endpoint returns JSON combining Attendance + Leave + Overtime + Holiday + Event data for a given employee and date range, so no data is typed twice. Rule of priority when several apply: Holiday > Approved Leave > Absent > Late. Suggested library: FullCalendar.js.

Task Division

Member	Assigned Tasks
#09	Calendar API (JSON aggregation of attendance, leave, OT, holidays, events), status-priority rules, performance for one-month queries.
#10	Employee dashboard UI: calendar, color legend, day pop-up, summary cards, leave-balance and next-payday widgets, mobile-responsive.
#11	HR employee search and calendar view, team/department calendar, company events management, print/PDF export of a calendar.

Calendar behavior summary: **Employee** logs in -> sees own calendar at once. **HR** opens 'Employee Calendar' -> searches name -> sees that employee's late, absent, leave and overtime days with the same colors and summary.

Module 5: Leave Management

Members Assigned	2 (#12-#13)
Short Description	Handles leave types, credits, filing, approval and balances.
Integrates With	Feeds Calendar, Attendance, Payroll, Reports.

Features and Detailed Explanation

- **Leave Types (configurable):** Vacation, Sick, Emergency, Maternity, Paternity, Solo Parent, Bereavement, Unpaid and others. For each: yearly credits, paid/unpaid, carry-over allowed, convertible to cash, attachment required (e.g., medical certificate).
- **Leave Credits & Balance Ledger:** Credits assigned per year or accrued monthly; balance is deducted when approved and restored when cancelled/rejected. Full ledger of every credit and deduction per employee.
- **File a Leave:** Date range, full/half day, reason, attachment. System checks balance, overlapping dates, blackout dates (e.g., major production dates set by HR) and weekends/holidays.

- **Approval Workflow:** Employee -> Supervisor -> HR. Statuses: Pending, Approved, Rejected, Cancelled. Comments at each step; in-app and email notification to the next approver and to the employee.
- **Leave Reports:** Leave history, balances per department, who is on leave this week, leave usage summary; unused-leave conversion figure passed to Payroll.
- **Integration:** Approved leave shows on the Calendar and prevents an Absent mark; unpaid leave becomes a payroll deduction.

Task Division

Member	Assigned Tasks
#12	Leave types and rules, credit assignment/accrual, balance ledger, blackout dates.
#13	Leave filing form and validation, approval workflow with notifications, cancellation, leave reports.

Module 6: Overtime & Shift Scheduling

Members Assigned	2 (#14-#15)
Short Description	Defines who works when, and handles overtime requests and premium pay rules.
Integrates With	Feeds Attendance, Calendar, Payroll.

Features and Detailed Explanation

- **Shift Templates & Assignment:** Templates such as Regular (9-6), Night, Production Call-Time; assign per employee or department; weekly schedule, rest days; schedule-change requests.
- **Overtime Request:** Employee files date, hours and reason (pre-approval); supervisor approves; system verifies against the actual time-out before counting it.
- **Configurable Rate Table:** Multipliers stored in a table, not hard-coded: ordinary day OT, rest day/special day, regular holiday, plus night differential. HR can update them when rules change.
- **Holiday Premium Rules:** Regular vs special holidays with multipliers; worked vs not-worked handling.
- **Summaries:** OT hours per employee/department per cut-off; feeds Payroll and Calendar (purple marker).

Task Division

Member	Assigned Tasks
#14	Shift templates, schedule assignment, rest-day setup, schedule-change requests.
#15	Overtime filing/approval workflow, OT verification, rate table and holiday premium rules, OT summary report.

Module 7: Payroll Computation & Payslips

Members Assigned	3 (#16-#18)
Short Description	The core of the system: automatically computes gross pay, deductions and net pay per cut-off and generates payslips.
Integrates With	Reads Employees, Attendance, Leave, Overtime, Statutory/Loans; feeds Reports.

Features and Detailed Explanation

- **Payroll Period Setup:** Semi-monthly (1-15, 16-end) or monthly cut-offs; pay date; payroll groups (e.g., regular staff vs project-based).
- **Payroll Run Wizard:** Select period -> system pulls attendance, leave, OT and adjustments -> Compute -> Review -> Approve -> Lock -> Release. Recompute possible until locked.
- **Automatic Computation:** Earnings: basic pay, overtime, holiday pay, night differential, allowances, bonuses/incentives. Deductions: late, undertime, absences, unpaid leave, statutory contributions, tax, loans. Result: Gross Pay - Deductions = Net Pay. Formulas and daily-rate factor (e.g., 261 or 313 days/year) are configurable.
- **Payroll Register & Exceptions:** Table of all employees with each component; exception list flags missing logs, negative net pay, missing government IDs, unapproved OT.

- **Status Flow & Control:** Draft -> For Review -> Approved -> Locked/Paid. Only Payroll Officer computes; only HR Head/Finance approves; locked payrolls cannot be edited (changes go through adjustments next cut-off).
- **Payslips:** PDF payslip per employee showing earnings, deductions, net pay and year-to-date; bulk generation; employees view/download only their own payslips in their account; optional email.
- **Bank & Export Files:** Excel/CSV export for bank transfer; payment method tagging (bank/cash).
- **Final Pay (optional):** Last pay for resigned employees: prorated salary, unused leave conversion, 13th-month share, pending deductions.

Task Division

Member	Assigned Tasks
#16	Payroll period setup, payroll run wizard, status workflow and approvals, payroll register and exceptions list.
#17	Computation engine (earnings, deductions, daily/hourly rate formulas), recompute logic, unit tests using the QA sample data set.
#18	Payslip PDF generation (single and bulk), employee payslip viewer, bank/Excel export, final-pay computation (optional).

Module 8: Statutory Contributions, Loans & Deductions

Members Assigned	2 (#19-#20)
Short Description	Handles government contributions, withholding tax, 13th-month pay, loans, and all other recurring or one-time earnings/deductions.
Integrates With	Feeds Payroll; reports feed Reports & MIS.

Features and Detailed Explanation

- **Government Contribution Tables:** SSS, PhilHealth and Pag-IBIG (employee and employer share) stored in editable tables with effectivity dates, so admins update them when the government changes rates - nothing hard-coded.
- **Withholding Tax:** Income-tax withholding computed from a configurable BIR tax table on taxable income after contributions; shown on the payslip and in reports.
- **13th-Month Pay:** Computed as total basic salary earned in the year divided by 12, with prorating for new hires/resignees and a 13th-month report.
- **Company Loans & Cash Advances:** Loan amount, term and amortization; automatic deduction each payroll; running balance; SSS/Pag-IBIG loan deductions can be entered per employee.
- **Recurring & One-Time Items:** Allowances (transport, meal), bonuses, commissions, production/talent incentives, reimbursements and one-time adjustments; flag taxable/non-taxable; effectivity dates.
- **Government Reports:** Monthly contribution summaries per agency and alphalist-style data exports for HR/Accounting to file (the system does not e-file).

Task Division

Member	Assigned Tasks
#19	Contribution tables and lookup logic, withholding-tax computation, 13th-month pay and report.
#20	Loans and cash advances with auto-deduction, recurring/one-time earnings and deductions, government report exports.

Module 9: Recruitment & Onboarding

Members Assigned	1 (#21)
Short Description	A simple applicant tracker and new-hire checklist for a starting team.
Integrates With	Creates records in Employee Records and User Accounts.

Features and Detailed Explanation

- **Job Openings:** Create job posts (position, department, headcount, status open/closed).
- **Applicant Tracking:** Applicant database with resume upload; pipeline stages: Applied -> Screening -> Interview -> Offer -> Hired / Rejected; interview schedule and notes; simple Kanban board.
- **Hire-to-Employee Conversion:** One click converts a hired applicant into an Employee Record (data auto-filled) - no re-typing.
- **Onboarding Checklist:** Requirements (IDs, government numbers, bank account), equipment, system account creation, orientation; progress percent per new hire.

Task Division

Member	Assigned Tasks
#21	All of the module: job openings, applicant pipeline, hire-to-employee conversion, onboarding checklist, module write-up.

Module 10: Talent & Project Contract Management (Art & Entertainment)

Members Assigned	1 (#22)
Short Description	Fits Flow Asia's business: many crew, artists and talents work per project, not on permanent payroll.
Integrates With	Reads Employees; feeds Payroll, Notifications, Reports.

Features and Detailed Explanation

- **Contract Records:** Types: fixed-term, project-based, freelance, talent. Start/end date, rate (per project/day/episode), attached signed contract.
- **Expiry & Renewal Alerts:** Notifications 30 and 15 days before contract end; renewal history.
- **Project Assignments:** Project name, role, dates, assigned crew/talent list; who is available in a date range.
- **Project-Based Pay Entries:** Approved project pay items feed Payroll as earnings, so contractors are paid through the same system.

Task Division

Member	Assigned Tasks
#22	All of the module: contracts, alerts, project assignments, project pay entries feeding Payroll, module write-up.

Module 11: Reports & MIS Dashboard

Members Assigned	2 (#23-#24)
Short Description	The 'MIS' layer: management-level dashboards and exportable reports built from all other modules.
Integrates With	Reads all modules.

Features and Detailed Explanation

- **HR Admin Dashboard:** Headcount, headcount per department, new hires and resignations, attendance today (present/late/absent), pending approvals, upcoming birthdays and work anniversaries, contract expiries.
- **Payroll Dashboard:** Total payroll cost per period and per department, overtime cost trend, contribution totals.
- **Standard Reports:** Employee masterlist, attendance summary, late/absence report, leave balances, OT report, payroll register, government contributions, 13th month, loan balances, turnover.
- **Filters & Exports:** Filter by date range, department, status; export to PDF and Excel; charts (Chart.js) for trends.
- **KPIs:** Attendance rate, lateness rate, turnover rate, OT cost, payroll cost per head.

Task Division

Member	Assigned Tasks
#23	HR and payroll dashboards, KPI cards, charts.
#24	Report generator (filters, tables), PDF and Excel export, saved report templates.

Module 12: Notifications, Announcements & Employee Self-Service

Members Assigned	1 (#25)
Short Description	Keeps employees and approvers informed and gives employees a single self-service place.
Integrates With	Used by all modules.

Features and Detailed Explanation

- **Notifications:** In-app bell and email for approvals, rejections, payslip ready, correction requests, contract expiry.
- **Announcements Board:** HR posts announcements/memos with optional attachments, visible on dashboards; read receipts optional.
- **Self-Service Profile:** Employees view profile, update contact details (HR approves), and download payslips and certificates.
- **Company Policies:** Download employee handbook and policy files; simple help/FAQ page.

Task Division

Member	Assigned Tasks
#25	Notification engine (in-app + email), announcements board, self-service profile updates, policy downloads, module write-up.

3.13 Support Teams

Support Team S1: UI/UX & Database Design

Members Assigned	2 (#26-#27)
Purpose	Sets the look-and-feel and the data foundation so all 25 developers build on the same base.

Member	Assigned Tasks
#26 (Technical Lead)	Database design: ERD, data dictionary, naming rules, migrations and seed data, indexes, DB access rules; sets coding standards, Git branching, and reviews merge requests.
#27	UI/UX: wireframes and Figma mockups for all screens, design system (colors, buttons, tables, forms), layout template, mobile-responsive guidelines, style guide handed to developers.

Support Team S2: Quality Assurance & Testing

Members Assigned	2 (#28-#29)
Purpose	Makes sure everything works before the client sees it.

Member	Assigned Tasks
#28 (QA Lead)	Test plan, test cases per module, functional and regression testing, bug tracking log, UAT scripts and sign-off sheet.
#29	Payroll validation with hand-computed sample employees (late, OT, holiday, leave cases), security tests (role access, password rules), basic performance and browser/mobile checks, UAT coordination with client.

Support Team S3: Documentation & Client Presentation

Members Assigned	3 (#30-#32)
Purpose	Produces all project papers and the presentation to the client.

Member	Assigned Tasks
#30 (Documentation Lead)	Project Proposal/Charter, Software Requirements Specification (SRS), scope and feasibility, assembles the final client paper and checks consistency.
#31	System design documents: use-case diagrams, data-flow diagrams, flowcharts, ERD write-up (with #26), user manual and admin manual with screenshots.
#32 (Assistant PM support)	Client presentation deck and demo script, training materials, and project-management support: meeting minutes, weekly progress reports, task-board upkeep.

4. Team Roster (32 Members) and Team Leads

Members are placeholders (#01-#32); replace with real names. Members whose tasks finish early help QA (testing their own module's edge cases) and Documentation (screenshots, manuals).

#	Team / Module	Main Role
#01	M1 System Administration, Authentication & Security	Login/logout
#02	M1 System Administration, Authentication & Security	User account management screens
#03	M2 Employee Records & Organization Setup	Employee profile CRUD
#04	M2 Employee Records & Organization Setup	Digital 201 file (uploads
#05	M2 Employee Records & Organization Setup	Organization master data (departments
#06	M3 Attendance & Time Tracking	Clock in/out and break logging
#07	M3 Attendance & Time Tracking	Computation engine (late
#08	M3 Attendance & Time Tracking	DTR daily/monthly views and print
#09	M4 Calendar & Schedule Dashboard (Key Requested Feature)	Calendar API (JSON aggregation of attendance
#10	M4 Calendar & Schedule Dashboard (Key Requested Feature)	Employee dashboard UI: calendar
#11	M4 Calendar & Schedule Dashboard (Key Requested Feature)	HR employee search and calendar view
#12	M5 Leave Management	Leave types and rules
#13	M5 Leave Management	Leave filing form and validation
#14	M6 Overtime & Shift Scheduling	Shift templates
#15	M6 Overtime & Shift Scheduling	Overtime filing/approval workflow
#16	M7 Payroll Computation & Payslips	Payroll period setup
#17	M7 Payroll Computation & Payslips	Computation engine (earnings
#18	M7 Payroll Computation & Payslips	Payslip PDF generation (single and bulk)
#19	M8 Statutory Contributions, Loans & Deductions	Contribution tables and lookup logic
#20	M8 Statutory Contributions, Loans & Deductions	Loans and cash advances with auto-deduction
#21	M9 Recruitment & Onboarding	All of the module: job openings
#22	M10 Talent & Project Contract Management (Art & Entertainment)	All of the module: contracts
#23	M11 Reports & MIS Dashboard	HR and payroll dashboards
#24	M11 Reports & MIS Dashboard	Report generator (filters
#25	M12 Notifications, Announcements & Employee Self-Service	Notification engine (in-app + email)
#26	S1 UI/UX & Database Design	#26 (Technical Lead)
#27	S1 UI/UX & Database Design	#27
#28	S2 Quality Assurance & Testing	#28 (QA Lead)
#29	S2 Quality Assurance & Testing	#29
#30	S3 Documentation & Client Presentation	#30 (Documentation Lead)
#31	S3 Documentation & Client Presentation	#31
#32	S3 Documentation & Client Presentation	#32 (Assistant PM support)

4.1 Team Lead Roles (inside the 32)

Lead Role	Member	Responsibility
Technical Lead	#26	Architecture, DB, coding standards, code review, unblocks developers.
QA Lead	#28	Test strategy, bug triage, release readiness.
Documentation Lead	#30	Owns all documents and the client paper's quality.
Assistant PM / Scrum Coordinator	#32	Task board, minutes, weekly reports, deadline reminders.
Module Leads	First member of each module (#01, #03, #06, #09, #12, #14, #16, #19)	Daily coordination inside their module, reports status to the PM.

5. Project Manager's Role and Management Team

Do you need your own team? For a 32-member team, the manager should not manage 32 people one-by-one. The recommended approach is a lightweight management structure built from the team itself (Section 4.1), so no extra headcount is needed: the PM directly manages 4 leads and 8 module leads, and they manage the rest. If the company can add one person, an Assistant Project Manager/Business Analyst would help, but it is optional.

5.1 Project Manager Responsibilities

- **Planning:** project charter, scope statement, work breakdown, schedule (sprints), budget/resource estimate, risk register.
- **Client management:** gather requirements with HR and Payroll, confirm payroll policies (rates, cut-offs, holidays), weekly or bi-weekly progress updates, demos at end of each sprint, change-request handling, UAT and final sign-off.
- **Team management:** assign members, set up Git and the task board, run sprint planning, resolve conflicts and blockers, keep workload balanced.
- **Quality and risk:** approve the test plan, review bug reports, ensure payroll results are verified before go-live, monitor risks weekly.
- **Communication:** weekly all-hands, sprint review and retrospective, one shared channel (e.g., Discord/Teams), minutes kept by #32.
- **Delivery:** deployment plan, user training, handover documents, warranty/support plan and lessons learned.

5.2 Communication Plan

Meeting	Frequency	Who	Purpose
Daily stand-up (10 min)	Daily	Each module	Done yesterday, plan today, blockers.
Leads meeting	Twice a week	PM + 12 leads	Progress, dependencies, risks.
Sprint planning / review / retrospective	Every 2 weeks	All 32 + PM	Plan, demo working features, improve process.
Client update	Weekly or bi-weekly	PM, Documentation Lead, client	Status, decisions, approvals.

6. Project Schedule (Approx. 17 Weeks)

Weeks	Phase / Sprint	Main Activities	Milestone
1-2	Initiation & Requirements	Client interviews, confirm payroll policies, charter, SRS draft, risk register	Requirements signed off
3-4	Design & Setup	ERD, wireframes/mockups, repo, environments, coding standards, task board	Design approved; skeleton app

Weeks	Phase / Sprint	Main Activities	Milestone
5-6	Sprint 1	M1 Admin/Login, M2 Employee Records & Org Setup	Login + employee master working
7-8	Sprint 2	M3 Attendance, M6 Shifts, M5 Leave	Clock in/out & leave working
9-10	Sprint 3	M4 Calendar dashboards, M6 Overtime, M12 Notifications	Calendar demo to client
11-12	Sprint 4	M7 Payroll core, M8 Contributions & tax	First test payroll run
13-14	Sprint 5	M8 Loans, M11 Reports/MIS, M9 Recruitment, M10 Talent contracts	Feature complete
15-16	Integration, QA & UAT	System testing, payroll validation, bug fixing, UAT with client users	UAT sign-off
17	Deployment & Turnover	Deployment, data migration, training, final documents, client presentation	Go-live & project closure

Documentation runs in parallel: SRS in weeks 1-2, design documents in weeks 3-6, manuals from week 9, final client paper compiled in weeks 15-17.

7. Documentation & Client Presentation Package

Prepared by S3 (#30-#32) with inputs from all module members and QA. Suggested contents of the final client paper:

Part	Document	Content	Owner
A	Project Proposal / Charter	Background of Flow Asia, problem statement, objectives, scope and limitations, deliverables, timeline, team, budget estimate, risks, benefits	#30
B	Software Requirements Specification	Functional requirements per module, non-functional requirements (security, performance, usability), user roles, assumptions, constraints	#30 + module leads
C	System Design	Use-case diagrams, data-flow diagrams (context, level 0, level 1), system flowcharts, ERD, data dictionary, system architecture, menu/site map	#31 + #26
D	UI Design	Wireframes, final mockups, screen list and navigation, color legend of the calendar	#27 + #31
E	Payroll Computation Guide	Formulas and worked examples (see Section 8), rate tables, assumptions confirmed by client	#17 + #19 + #30
F	Test Documentation	Test plan, test cases and results, bug log, UAT sheet and client sign-off form	#28 + #29
G	User Manual	Employee guide, Supervisor guide, HR guide, Payroll guide (step-by-step with screenshots), FAQ	#31 + all
H	Admin & Technical Manual	Installation/deployment guide, database backup/restore, settings guide, security practices, API notes	#26 + #02
I	Project Management Reports	Schedule/Gantt, sprint reports, meeting minutes, risk register, change requests, lessons learned	#32 + PM
J	Training Materials	Slide decks, quick reference cards, demo accounts and practice data	#32
K	Client Presentation Deck	Problem and solution, module overview, live demo (Calendar, payroll run, payslip), timeline, benefits, next steps, Q&A;	#32 + PM
L	Turnover & Support Plan	Handover checklist, warranty period, support contacts, maintenance schedule, future enhancements	PM + #30

Suggested 20-minute presentation flow: 1) Client's needs, 2) Solution overview, 3) Live demo (employee calendar, HR search-view, attendance, leave, payroll and payslip, dashboard), 4) Security and data privacy, 5) Timeline and team, 6) Benefits and next steps.

8. Sample Payroll Computation (For Configuration and Testing)

Illustration only; final values and factors must be confirmed by the client's HR/Accounting. Employee: monthly salary PHP 30,000, semi-monthly, daily-rate factor 261 days/year.

Item	Formula	Result
Daily rate	30,000 x 12 / 261	PHP 1,379.31
Hourly rate	Daily rate / 8	PHP 172.41
Per-minute rate	Hourly rate / 60	PHP 2.87
Semi-monthly basic pay	30,000 / 2	PHP 15,000.00
Late deduction (20 min)	20 x 2.87	- PHP 57.47
Overtime (2 hrs, ordinary day at 125%)	2 x 172.41 x 1.25	+ PHP 431.03
Gross pay	15,000 - 57.47 + 431.03	PHP 15,373.56
Deductions	SSS + PhilHealth + Pag-IBIG (from tables) + withholding tax + loans	Computed from setup tables
Net pay	Gross - total deductions	Auto-computed

QA (#29) prepares at least 10 test employees covering: late, absent, half-day, unpaid leave, OT on ordinary/rest/holiday days, night differential, loans, new hire (prorated) and resignee (final pay).

9. Core Data Tables (Starter ERD Overview)

users, roles, permissions, employees, departments, positions, employee_documents, employment_history, compensation_history, shifts, schedules, holidays, company_events, attendance_logs, attendance_daily, correction_requests, offsite_requests, leave_types, leave_balances, leave_requests, overtime_requests, payroll_periods, payroll_runs, payroll_items, payslips, contribution_tables, tax_tables, loans, earnings_deductions, applicants, job_openings, onboarding_tasks, contracts, projects, project_assignments, notifications, announcements, audit_logs, settings.

10. Risks and Mitigation

Risk	Mitigation
Inexperienced team; scope too big	Small 2-week sprints, MVP first, optional features (final pay, QR kiosk, ID cards) only if time remains; Technical Lead reviews code.
Wrong payroll computations	Rates in editable tables; hand-computed test cases; parallel run (system vs old method) for one cut-off before go-live.
Changing requirements	Signed SRS and a change-request form; PM approves changes with client.
Payroll/HR data security and privacy	RBAC, hashed passwords, audit trail, HTTPS, backups; follow the Data Privacy Act of 2012 (limit access to personal data).
Team members overloaded or blocked	Daily stand-ups, module leads, PM rebalances tasks; QA/Docs helpers.
Integration problems between modules	Shared ERD and API rules, integration tests in Sprint 3 and 5, single Technical Lead.
Client availability delays	Fixed weekly client slot; approvals tracked in the risk log.

11. Acceptance Criteria (Definition of Done)

- Every module feature above works in the staging system and passes its test cases with no critical or high bugs open.
- Employee dashboard shows the color-coded calendar immediately after login; HR can search any employee and view late, absent, leave and overtime days.
- Payroll run produces correct net pay for all sample employees and generates payslips as PDF.
- Role permissions verified (an Employee cannot see other employees' data or payroll).
- All documents in Section 7 are delivered; UAT signed by the client; users trained.

Assumptions: the client provides current government contribution and tax tables and company pay policies; the system is web-based (desktop and mobile browser); the team works around 4-5 months part-time or ~17 weeks full-time. Timelines are estimates and should be adjusted after requirements are finalized.
